No Farmers  
No Food   
No Future

Tap News | Ian

We are now being told that producing food is bad for the planet. To “sustainable” globalists insist, farms must be shut down across the globe.

Subscribe

Under the guise of reducing “methane emissions,” thirteen nations have signed a pledge to engineer global famine by gutting agricultural production and shutting down farms. Announced earlier this year by the Global Methane Hub — a cabal of crisis engineers who exploit public panic to destroy the world food supply — those thirteen nations are:

**Argentina, Australia, Brazil, Burkina Faso, Chile, Czech Republic, Ecuador, Germany, Panama, Peru, Spain, the United States, and Uruguay.**

Imagine no meat production from Australia, Brazil and the USA. This is the goal of the globalists. And they admit it’s all part of the climate fraud which has been thoroughly exposed as a quack science hoax, by the way. As Luis Planas, Spain’s Minister of Agriculture, Fisheries and Food says,

“I am glad to see the shared commitment by the international community to mitigate methane emissions from agriculture as a means to achieve the goals we signed for in the Paris Agreement on climate.”

“Food systems are responsible for 60% of methane emissions,”

warns Marcelo Mena, CEO of the Global Methane Hub. She is saying that farming is destroying the planet. Hence, their demand to shut down farms. Without farms, you have no food. And without food, you get exactly what Kamala Harris called for over the weekend:

“Reduced population.”

The depopulation agenda is no longer even a secret. They are bragging about it.

And here’s their logic: FOOD = GLOBAL WARMING. So they are attacking food and shutting it down.

## Cows and chickens to be replaced by crickets and insect larvae

Enjoy the crunchy fake meat patties and Cricket McNuggets. Soon, you'll be [they want you to be] eating bugs because meat will be wildly unaffordable due to the governments shutting down farms and ranches. As journalist Leo Hohmann explains:

*We can presume from this language that among the practices being considered are replacing a major portion of the beef and dairy cattle, pork and chicken stocks that populations rely on for protein with insect larvae, meal worms, crickets, etc. The U.N., World Economic Forum and other NGOs have been promoting meatless diets and the consumption of insect protein for years, and billionaires have invested in massive insect factories being built in the state of Illinois, in Canada and in the Netherlands, where meal worms, crickets and other bugs will be processed as additives to be inserted into the food supply, often without clear labels that will inform people of exactly what they are eating.*

Hohmann also refers to the Deagel forecast which projects an almost 70 percent reduction of the U.S. population by 2025, saying:

*There is no more efficient way to depopulate than through war, famine and plagues. Isn't it interesting that all three of these time-tested methods of murder are in play right now?*

In a related story, Michael Snyder from *The Economic Collapse Blog* writes:

*Global food supplies just keep getting even tighter, and global hunger has risen to extremely alarming levels... According to the United Nations, nearly 30 percent of the global population does not have constant access to food right now, and there are approximately 900 million people that are facing "severe food insecurity"...*
